

# JUKEBOB

Your Ultimate Party Entertainment Hub

**PLATFORM WALKTHROUGH**

For Legal Review • December 2025 • Version 1.0

# What is JukeBoB?

A simple explanation of our entertainment platform

## In Simple Terms

JukeBoB is a **party entertainment application** that allows people at events, bars, weddings, or private parties to interact with the DJ or entertainer through their smartphones.

## The Core Idea

Instead of walking up to a DJ to request a song, guests can use our app to submit song requests along with optional tips. The DJ sees all requests on their screen and decides which songs to play.

## Think of it like...

A digital jukebox where party guests can request songs and tip the DJ, combined with a game room where people can play games together, and an AI assistant that helps mix music.

## Three Main Features

### Jukebox

Guests request songs

Optional tipping system

Priority queue for bigger tips

Real-time updates for everyone

### Games

Play games with other guests

Currently: Tic Tac Toe

Real-time multiplayer

Fun emoji reactions

## How It Works

The complete flow from start to finish

## The People Involved

| Role             | Who They Are                                                | What They Do                                                 |
|------------------|-------------------------------------------------------------|--------------------------------------------------------------|
| Host/DJ          | The person running the music (DJ, wedding band, party host) | Creates a session, sees requests, plays songs, collects tips |
| Guests           | Party attendees, wedding guests, bar patrons                | Join the session, request songs, optionally tip the DJ       |
| JukeBoB Platform | Our application                                             | Connects everyone, manages the queue, processes payments     |

### No App Download Required

Guests access JukeBoB through their phone's web browser. They simply scan a QR code or enter a session code to join. No app store download is needed.

## The DJ's Journey

Step-by-step process for the host/entertainer

1

### Create a Session

The DJ opens JukeBoB and creates a new "jukebox session." They give it a name (e.g., "John's Wedding Reception") and set a password to keep it secure.

2

### Get a Session Code

The platform generates a unique code (like "ABC123") and a QR code. The DJ displays this code so guests can join their session.

3

### View the Dashboard

The DJ sees a dashboard showing: all song requests, who requested them, tip amounts, and the order songs should be played.

4

### Manage the Queue

The DJ can: mark songs as "played" when finished, skip songs (tips are refunded if skipped), and see total earnings in real-time.

5

### Cash Out

At any time, the DJ can "checkout" to receive their tips. JukeBoB takes a **5% platform fee**, and the DJ receives the remaining **95%**.

### Example

If a DJ collects ₹1,000 in total tips during a party, they receive **₹950** (after JukeBoB's ₹50 platform fee).

## The Guest's Journey

Step-by-step process for party attendees

1

### Join the Session

The guest scans the QR code displayed at the venue OR enters the session code on the JukeBoB website. They enter their name and the session password.

2

### See the Current Queue

The guest can see what songs are already requested and what's been played. This helps them know if their song is already in the list.

3

### Request a Song

The guest enters the song name and artist. They can optionally add a tip amount. Bigger tips mean their song gets played sooner!

4

### Track Their Request

The guest can see where their song is in the queue and watch it move up as other songs get played.

5

### Enjoy the Music!

When their song plays, they get the satisfaction of hearing their choice at the party.

### Tipping is Optional

Guests are **not required** to tip. They can request songs for free. However, tipping gives priority. Songs with tips of ₹10 or more go into a "VIP Queue" and are played before non-VIP songs.

## The Queue System

How song requests are prioritized

### VIP Queue

**Requirement:** Tip of ₹10 or more

Songs are played FIRST

Higher tips = Higher priority

Special golden highlighting

Crown icon displayed

### Regular Queue

**Requirement:** Tip less than ₹10 (or no tip)

Played AFTER all VIP songs

First-come, first-served order

Standard display

Still gets played eventually

## Example Queue Scenario

| Position | Song              | Guest | Tip  | Queue Type                                                                                    |
|----------|-------------------|-------|------|-----------------------------------------------------------------------------------------------|
| 1st      | "Shape of You"    | Rahul | ₹100 |  VIP     |
| 2nd      | "Despacito"       | Priya | ₹50  |  VIP     |
| 3rd      | "Blinding Lights" | Amit  | ₹10  |  VIP     |
| 4th      | "Happy Birthday"  | Sneha | ₹5   |  Regular |
| 5th      | "Old Town Road"   | Karan | ₹0   |  Regular |

## Fair Play

The queue has a **maximum of 10 songs** at any time to ensure songs don't wait too long. The DJ always has the final say on what gets played.

## How Money Flows

Understanding the payment and tipping system

### Payment Breakdown

| Item               | Amount        | Description                             |
|--------------------|---------------|-----------------------------------------|
| Guest's Tip        | ₹100.00       | The amount the guest chooses to tip     |
| Platform Fee (5%)  | - ₹5.00       | JukeBoB's fee for providing the service |
| <b>DJ Receives</b> | <b>₹95.00</b> | Final amount to the DJ                  |

#### ✓ Scenario A: Song Gets Played

Guest tips ₹100 → Song moves to "Recently Played" → DJ receives ₹95 (after 5% fee)

#### 🔄 Scenario B: Song Gets Skipped (Refund Protection)

Guest tips ₹100 → DJ skips the song → **Full ₹100 refunded to guest** → DJ receives ₹0

### Customer Protection: The Refund Mechanism

This is a **critical consumer protection feature**. The tip money is **held securely by JukeBoB** until the service is delivered (i.e., the song is actually played). Here's how it works:

- **Money in Escrow:** When a guest tips, the money is held by JukeBoB, NOT immediately given to the DJ
- **Song Must Be Played:** The DJ only receives the tip when they mark the song as "Played" and it moves to the "Recently Played" section
- **Automatic Refund on Skip:** If the DJ clicks "Skip" on a song request, the full tip amount is automatically refunded to the guest
- **No Manual Process:** Refunds happen instantly and automatically - no customer support needed

### Why This Matters (Legal Perspective)

This escrow-style system ensures that **customers only pay for services actually rendered**. The DJ cannot collect tips for songs they never play. This protects consumers from:

- Paying for a service not delivered
- DJs collecting tips and ignoring requests
- Disputes over whether a song was played

### Current Status

Payment processing is currently **simulated** for demonstration. Real payment integration (UPI, credit cards via Razorpay/Stripe) will be added before commercial launch.

## Games Feature

Entertainment beyond music

### Why Games?

JukeBoB includes simple multiplayer games so party guests can entertain themselves between songs or during breaks. It keeps guests engaged with the platform.

### Currently Available: Tic Tac Toe

1

#### Create a Game Room

One person creates a game room with a password. They get a room code to share.

2

#### Opponent Joins

The second player joins using the room code and password.

3

#### Play in Real-Time

Both players see moves instantly on their screens. No refreshing needed.

4

#### React with Emojis

Players can send fun emoji reactions (😄 🤖 🕶 🏆) that float across both screens.

### Scoreboard & Leaderboard

The game tracks wins, losses, and winning streaks. Players can see their stats and compete for bragging rights.

### Planned Games

| Game        | Players   | Status      |
|-------------|-----------|-------------|
| Tic Tac Toe | 2 players | ✅ Available |

## Security & Privacy

How we protect users and their data

### Password Protection

Every session requires a password set by the host. Only people with the password can join. This prevents random people from disrupting events.

### Encrypted Passwords

Passwords are never stored in readable form. They are encrypted using industry-standard SHA256 hashing before storage.

### Session Persistence

If a user closes their browser, they can resume their session with the code and password. No need to re-enter all information.

### No Account Required

Guests don't need to create accounts or provide email addresses. They just enter their name and join. Minimal data collection.

## Data We Collect

| Data          | Purpose                  | Retention      |
|---------------|--------------------------|----------------|
| Display Name  | Show who requested songs | Session only   |
| Song Requests | Build the queue          | Session only   |
| Tip Amounts   | Process payments         | For accounting |
| Game Moves    | Play games               | Session only   |

### Current Limitation

Data is currently stored **in-memory only**. When the server restarts, all session data is lost. For production, we will integrate a proper database for data persistence.

## Summary

### Key takeaways

#### What JukeBoB Is

A party entertainment platform that lets guests request songs from DJs and play games together, with an optional tipping system.

#### Business Model

JukeBoB takes a **5% fee** on all tips processed through the platform. The remaining 95% goes to the DJ/host. The platform is free to use without tipping.

#### Key Legal Considerations

- Tips are voluntary and not required to use the service
- Money is held in escrow until services are rendered (song played)
- Refunds are automatic if a song is skipped
- No gambling or betting elements in games
- Users don't need to create accounts (minimal data)
- Password protection for private sessions

#### Current Status

The platform is **fully functional** but uses simulated payments. Real payment gateway integration (Razorpay/Stripe) will be added before commercial launch.
